

Sample Data Collection for Latency

The student will activate an ultra-lite switch, positioned on the right cheek within 8 seconds to...

- engage in leisure activities (e.g., play music)
- help others (e.g., operate an appliance)
- have a voice (e.g., use the Step-by-Step Communicator to greet others)
- use the computer (with switch interface with screen placed in field of vision)

... 4 to 5 times on 3 consecutive days.

Please record the length of time it takes for the student to press a switch placed on the right cheek to restart music playing, after the music has stopped.

Then calculate the average time.

	Jan 19 (Sec.)	Jan 20	Feb									
1	7	4										
2	14	6										
3	9	1										
4	15	35										
5	5	12										
6	8	19										
7	18	5										
8	6	6										
9												
10												
Average sec.	10.25	10.22
